

AQtivate Pro Substation monitoring

The AQtivate PRO software offers a truly plug and play solution to control and manage Arcteq's innovative AQ 200 series IEDs. The AQtivate PRO scalability makes it suitable for variety of applications. It can be applied as a cost efficient permanent substation HMI or as a protection maintenance and back-up control system. The AQtivate PRO supports mobile application and can be installed in laptop computers for portable substation management solutions.

AQtivate PRO offers total life cycle cost reductions for project engineering phase, project commissioning and during normal use of substations.

AQtivate PRO benefits:

- Ethernet connection to IEDs
- Faster engineering by drag and drop of IED configuration and CID files
- Commissioning troubleshooting aid
- Faster fault analysis
- Automatic disturbance recorder downloading
- Event and alarm lists
- Automatic updating of engineering files from substations
- Back-up or primary control and status indication (optional)
- Measurement trends

Technical Data

GENERAL

Total substation management solution
Engineering tool for drag and drop of files into IEDs
Measurement trend displays
Consolidated chronological views of substation events and alarms with time stamp
Automatic disturbance recorder download
Remote setting and fault register access
Accurate protection maintenance data
